TRIAL EXHIBIT 2052

UNITED STATES DISTRICT COURT
NORTHERN DISTRICT OF CALIFORNIA

CASE NO. 10-03561 WHA
DATE ENTERED _____

BY _____ DEPUTY CLERK _____

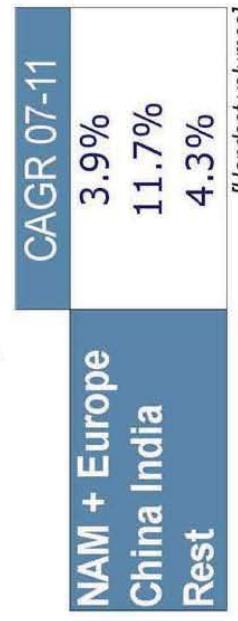

Wireless Java vision

Java is what makes all mobile devices work

- > Java is recognized and valued as the superior software platform to deliver compelling online services and content across all mobile devices

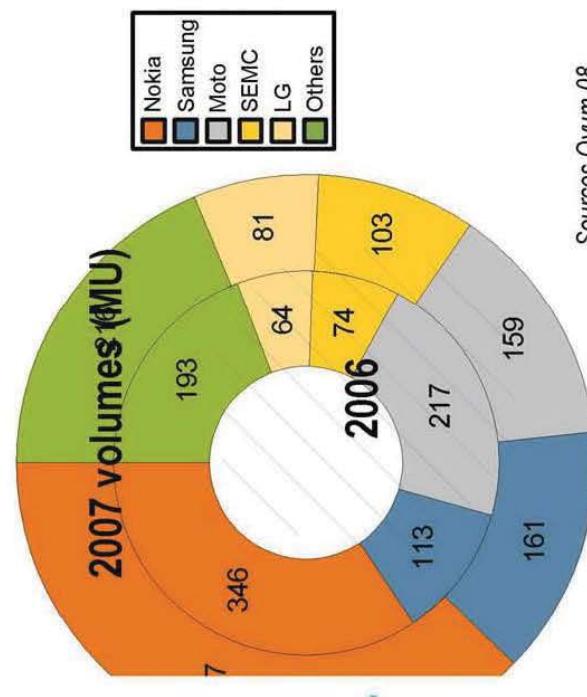

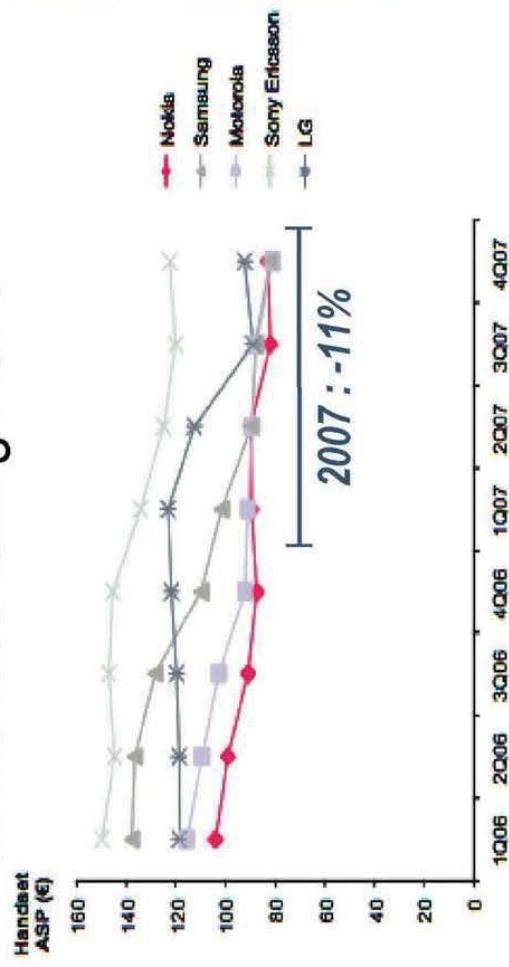

Handsets : Growing, Maturing

- Market growth is now driven by China / India

- 5 vendors = 80% of the market
 - Nokia remains dominant: superior profitability, market share
 - Vendors from PRC, Korea & Taiwan building brands, gaining share

- OEMs face falling ASPs

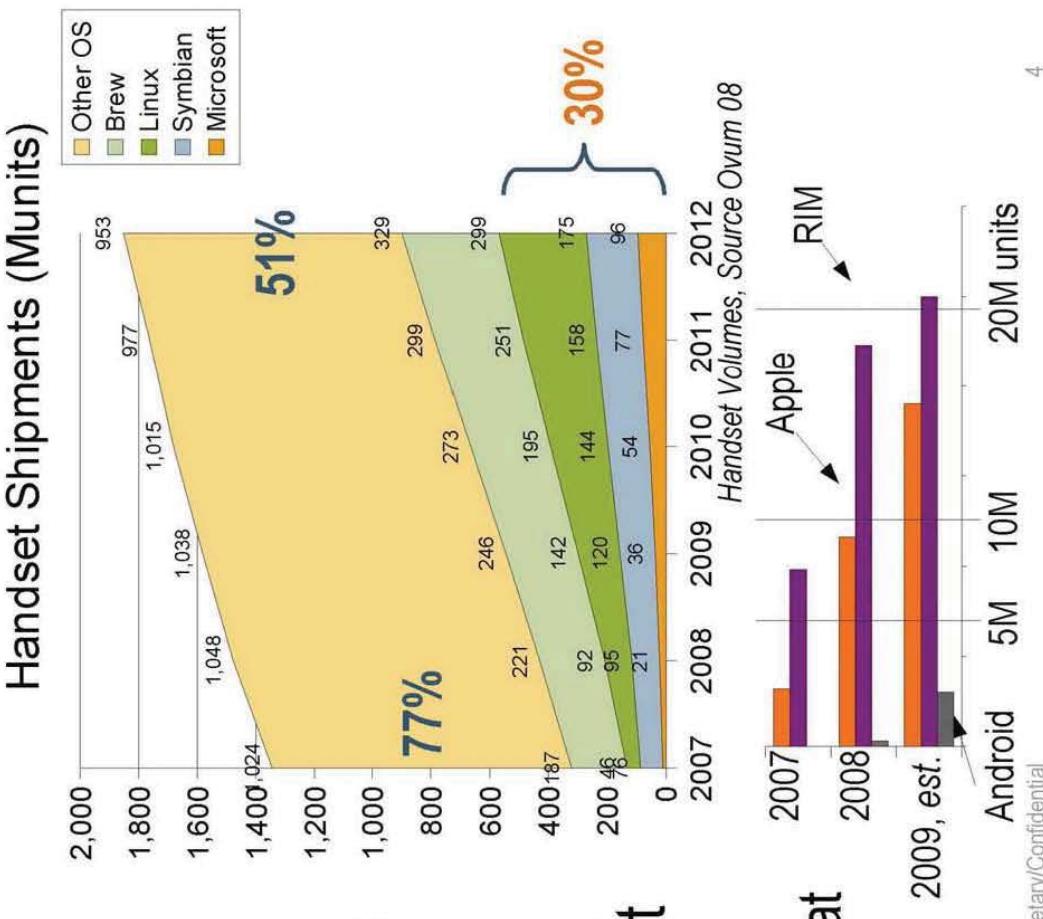

CONFIDENTIAL

OAGOOGLE00000156420

3

Open, Rich Platforms Emerging

- RTOS share shrinking but remains largest segment
 - > Smart OS reach 30% in 4 yrs.
 - > Giving developers more options besides Java to deploy rich content
- Lino/Symbian/Android driving OS & middleware into low cost
- Diversity remains
 - > Operators expected to support at least 3 platforms

CONFIDENTIAL

OAGOOGLE00000156421

4

Operators Drive the Market

- Operators subsidize and set requirements for devices and content. Sun-Operator engagement is critical to Java success.

CSG Activity

	SUBSCRIBERS (Millions)		Share
1	China Mobile	369	17%
2	Vodafone	252	12%
3	Telefónica / Movistar / O2	171	8%
4	China Unicom	160	7%
5	América Móvil	153	7%
6	T-Mobile	123	6%
7	Orange / France Télécom	110	5%
8	Telenor	90	4%
9	MTS	84	4%
10	AT&T Mobility	71	3%
11	Verizon	67	3%
...			
19	Sprint/Nextel	53	2%

- Some engagement, but not much focus
- Various engagements but limited in scope
- Current CSG strategic focus is on US carriers leveraging broader SMI relationships and strong CDMA market.

Mobile Operators need ...

Products and services that drive:

- Low cost of ownership
 - Consistent user experience driving brand
 - Minimal development, test, distribution, and support costs
- Attractiveness/Stickiness
 - Enlist new customers and retain users on their network
- New monetization vectors
 - Generate revenue streams outside of data subscription plans such as advertising, distribution, premium services...
 - Deliver services on all devices – not only smartphones

Wireless Java Problems

- Java is not the vehicle for flagship content
 - No buzz around Java apps
 - Alternatives to Java targeting ease of creating compelling apps
- Fragmentation(s) damage Java value proposition
 - Limitation of WORA means increased testing costs, lower margins
 - Lack of coherent ecosystem/model to bring applications to market
- CSG monetization of the wireless market is very low, limited
 - Sun revenue < 0.1% of device price
 - Sun revenue = 0% of operator ongoing ARPU

Competition

Java is the Competitive Target

- Java is strongest cross device run-time & language
- Competition is evolving to dislodge Java – targeting Java weaknesses (fragmentation, ease of development, biz model)
- In one year there will be proven, credible alternatives to Java for developers

8

OAGOOGLE00000156425

CONFIDENTIAL

Call to Action

Few Short Years Ago...

ME monetization model under price pressure

Partners/Customer not valuing monetizing
IP/conformance instead of Implementation

New entries creating alternatives for developers
(flash/web)

And...

Developers finding platform complex

No unified java developer channel to market

Growth in BRICA

2008 Cellphone Shipments by Region

Growth Indications China, Africa, India

CONFIDENTIAL

OAGOOGLE00000156431

The BRICA Opportunity

Java is the best possible solution for BRICA

- **BRICA mandates ULC mobile phones**

- Our competition is much weaker here
 - > Flash, iPhone, Android, WinMobile not relevant
 - > This is where the volume / growth / \$\$\$
 - > JavaME is the natural choice. Covering the full range from ULC-Feature phones-Smart phones

- **Maximizing the opportunity with phone-top**

- Offering excellent value for a competitive price
- Moving up in the chain – position Java as a center
- Leverage existing OEM relationships to construct the new “BRICA solution”

BRICA countries will represent 44 % of global GDP

OneJava Vision

- One modular Java across all screens of your life
 - Scalable footprint for an ever increasing range of devices
 - Support for common JavaFX functionality on all screens
- Best of class universal language
 - Leverage the latest Java language set
 - Enabling 6+ million developers to reach outside the desktop
 - Creating an even richer pool of tools

Directions for Java

19

OAGOOGLE00000156436

CONFIDENTIAL

Project Daneel

- Sun is the source for certified, indemnified Java for Android Platform
- FX Mobile enabled, JavaME enabled
- Multi-Phased approach
 - Phase 0 – Java ME
 - Samsung, Borks, HTC, LGE and others expressing interest
 - Phase 1 – 1 VM
 - Phase 2 – Full linux platform
 - Announce Phase 0 now to OEM partners
 - Go Public with entire plan by JavaOne

OAGOOGLE00000156437

Growing the Wireless Business

- ODP (On Device Portal)
 - Quick Service Deployment
 - Connected Back
 - Idle Screen
- Capture more Developers/Content
 - JavaFX
 - Web Technology Integration (align & extend)
 - Browser Integration & Rendering technologies (Project Snapple)
 - JavaScript, JSR 290, etc.
 - Web Server
 - OneJava
- Provide Java Based Solution for low end handsets

FY09 Product Priorities

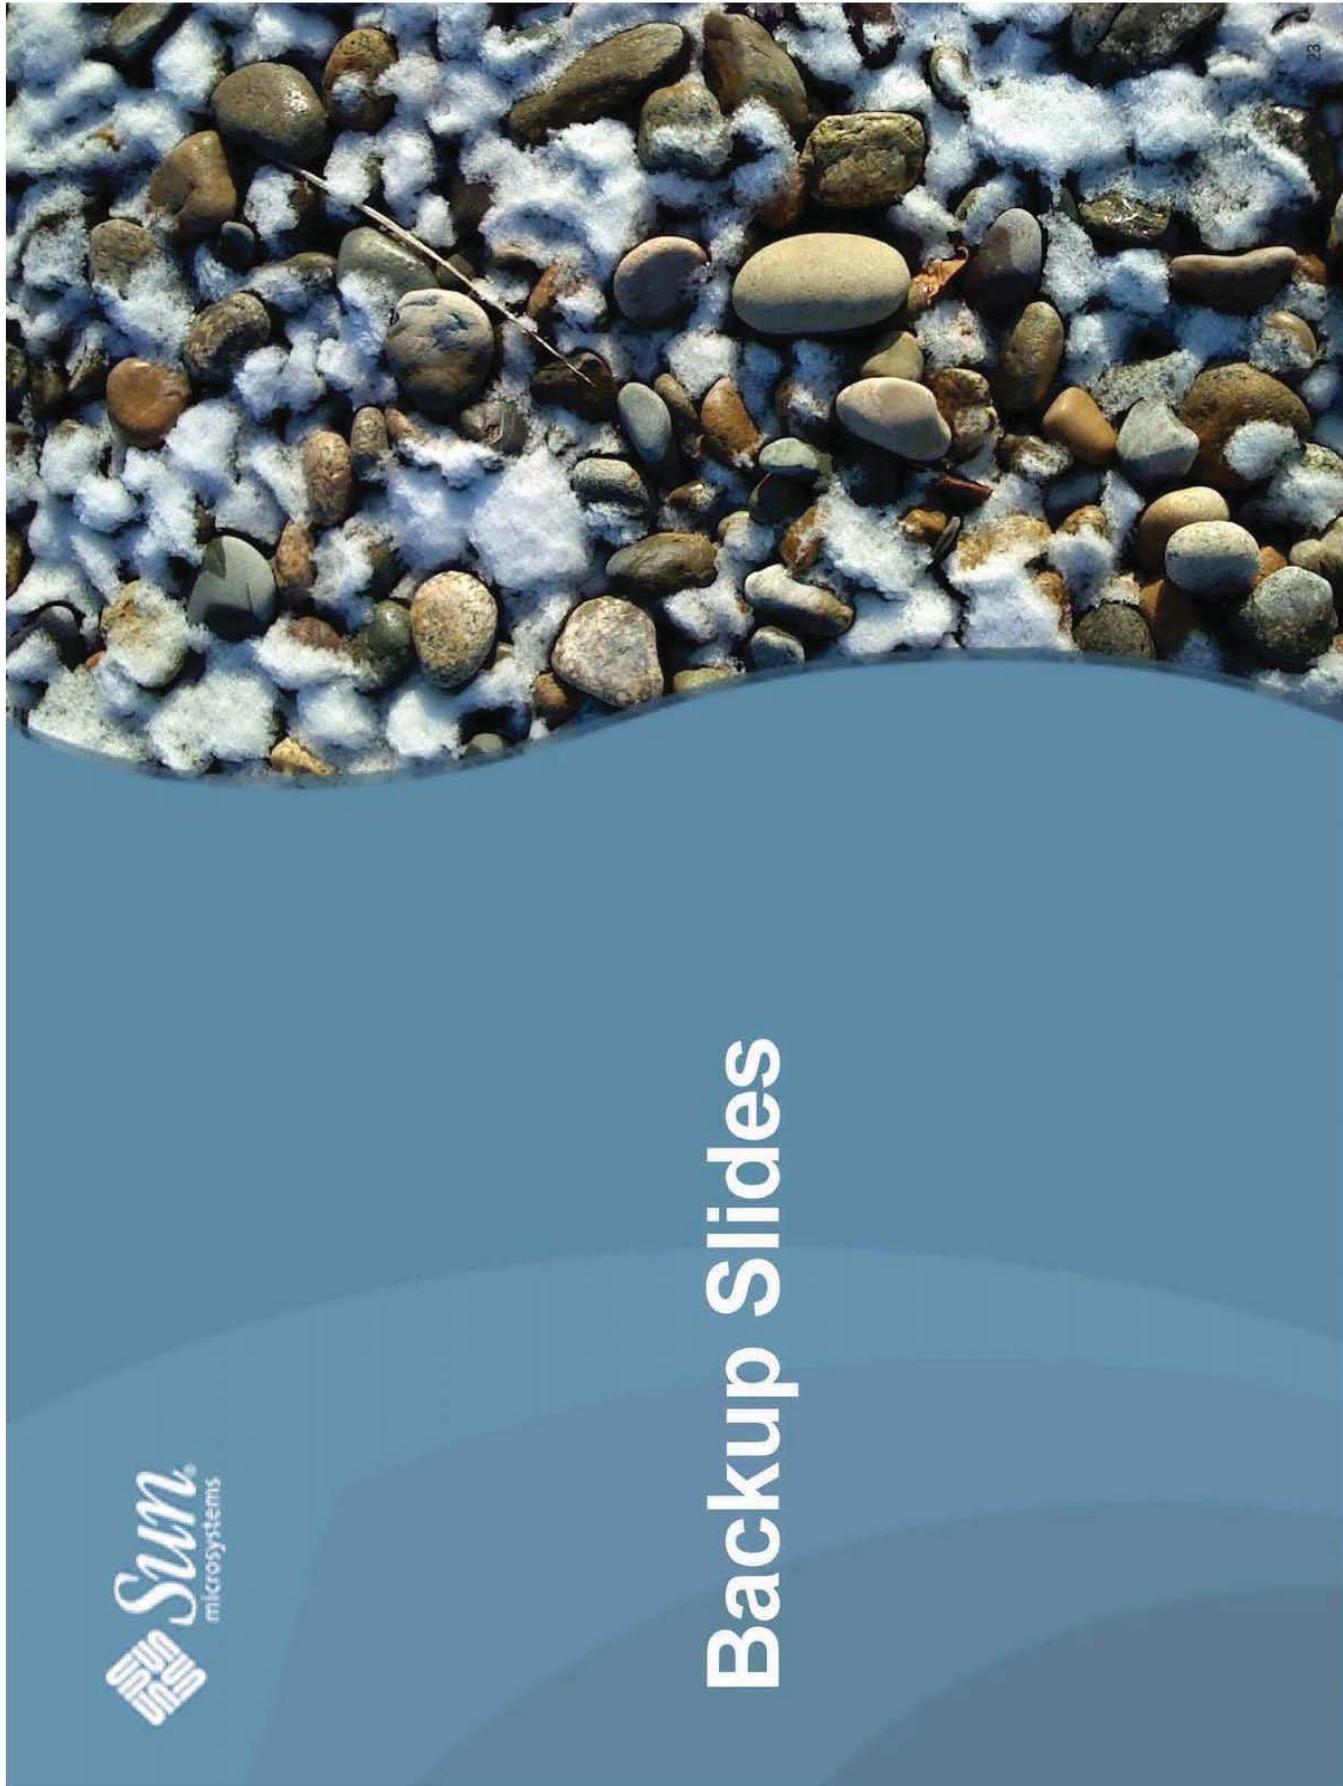

- Sun Java Wireless Client and Binary Releases
 - > Best of breed MSA implementations
 - > Monetize at the point of value with Engineering Services
 - > Java impl. as first-class citizen on the phone with ODP
- Next Generation Wireless Client – Migrate to One Java
 - > Leverage opportunity from migration to MSA2
 - > Vehicle for platform “facelift” & innovation – toward “OneJava”
- Java Task Force Against Fragmentation (JATAF)
 - > Increase quality & consistency of Java implementations/apps
 - > Participation and group work should drive new test development, implementation modifications/clarifications
